

- Install web Man Mod
- Start Game
- Use a browser to enter the ip address of the console.
- In the **PS3MAPI** tab find the **Processes Commands** section and enter the desired memory **Address**.
- Press **Get**.
- Scroll down to the **Value** section and change the Desired byte.
 - For the values, check on RPCS3 in the pages related to the game you want to unlock. A few are listed below.
- Press **Set**.
 - The screen will flash and the change should take effect immediately.
- We can create per title ID scripts via webMAN to apply them at boot
